The prior art does not teach or fairly suggest configuration storage at each switch configured to store a primary time/space configuration table and a standby time/space configuration table, where each switch is configured to switch between the primary and secondary tables in response to the configuration select signal".

USP 6,714,537 to Adam et al. discloses a switching system that stores first and second configuration tables that are selected through a table select signal. However, Adam discloses the first and second tables stored for the entire switching matrix, rather than storage by each switch, as claimed.
